

# HAE29B HAE43B

## HAE29BEC HAE43BEC

### Dual AZ/EQ Strain Wave Gear Drive Mounts

Keeping pace with the current rapidly developing technology environment the iOptron HAE29, HAE29EC, HAE43 and HAE43EC SWG mounts have added new "B" iMate versions. iMate model mounts feature a powerful 64-bit ARM based on-board computer with Wi-Fi, preloaded KStars planetarium software, Ekos control and automation tool with INDI drivers. This hardware-software combination will support the use of most current and future devices allowing the user choice of brand and model (cameras, focusers, filter wheels, etc.). With 32 GB eMMC storage along with a slot for an up to 64 GB TF (micro SD) memory, the iMate has the ability to control and capture an entire automated imaging session. The iMate is cross-platform; use it with Windows, IOS, Linux, Android etc. All HAE iMate dual SWG Alt-az/ Eq mounts now have an internal main board and no longer requires a handset for use.
